

# NEW PRODUCTS from *Ranger Pumps* **22 Series External By-Pass**

Ranger is proud to now offer the 22 Series External By-Pass. Serving a similar purpose as the internal relief valve, our new External By-Pass diverts fluid flow to alleviate excessive pressure in the discharge line, acting as an extra safety measure. The ball valve features a lever that allows for quick open/close action. The External By-Pass is sturdily constructed with stainless steel parts, cast iron flanges, and stainless steel and polypropylene V-Coupler Dust Caps. These systems come complete with a Ranger 3 inch 90 degree elbow and a straight 3 inch flange, along with all the gaskets and hardware necessary to easily mount directly to a Ranger 3 inch 22 Series Pump.

***All By-Pass systems are 100% air tested from the factory!***
